

User interface design

Merito University Warsaw, summer semester 2025

Final project

The final project consists of three elements. All of them should be done.

1. Your analysis of the polish railway ticket ordering system (www.pkp.pl). You should describe the functionality of the system, paying attention on two factors: what is available (how convenient, clear and reliable the system is) and how well it is designed. Please note the visual appearance and usability.
Your evaluation should be in written form, PDF – at least 3 pages (not including pictures :D)
2. A prototype of the mobile application for city navigation for youngsters (14-16 years old). The scope of the functionality should be your decision. Please make a visual prototype, with a tree of functions with screens. Use any modelling method you know. This task is purely visual – no coding is needed.
3. A working system for online patient registration at the small private clinic. It should be done in HTML/CSS, but no backend is required (that is, you don't need to connect to a database – a simulation is OK!). The website should be responsive – both mobile and desktop versions. Please specify the desired functionality and code it.

How to deliver?

Make ONE PDF file, including analysis (task 1), screens of an application (task 2) and at least 4 screenshots of working application (2 for the mobile and 2 for the desktop).

Don't forget to include your name and Student ID.

Name this PDF with your Student ID (e.g. 34533.pdf).

Send the PDF by email to: w.moscibrodzki@gmail.com, using INTERFACE DESIGN MERITO as a subject. In the email body please repeat your name and Student ID.

Deadline: 01.06.2025

PDF send before 10th May 2025 will be evaluated 1 grade higher (if positive)
